

VITALII KANDABAROV

Full-Stack Developer · Cybersecurity Graduate Student · AI Integration Specialist

vtkm96@gmail.com · linkedin.com/in/vkandabarov · t.me/vitali96 · Waco, TX

PROFESSIONAL SUMMARY

Security-minded full-stack developer with **6+ years of experience** designing and delivering resilient web applications, RESTful APIs, and AI-integrated systems. Currently pursuing a **Master of Science in Information Systems (Cybersecurity concentration)** at Baylor University. Practitioner of **Spec-Driven Development**: define clear specifications first, leverage AI to generate code and content, then rigorously review and validate every output — combining AI speed with human judgement. Strong command of Python/Django, React/TypeScript, Google Gemini AI, multi-agent n8n automation, and cybersecurity principles. Proven record of quantified impact: -40% tracking inefficiency, -25% technical debt, +50% analysis speed.

PROFESSIONAL EXPERIENCE

Teacher Assistant · Baylor University

Aug 2025 – May 2026 | Waco, TX

- Support graduate-level Information Systems and Cybersecurity courses for 40+ students per semester.
- Assist with debugging sessions, code reviews, and conceptual walkthroughs for Python and web development assignments.
- Contribute to lab exercise design and course material preparation.

Software Engineer Intern · Brazos Innovation Partners

Jun 2025 – Jul 2025 | Waco, TX

- Contributed to full SDLC across frontend and backend in an Agile/Scrum team.
- Built interactive UI components and pages using React and TypeScript; maintained Python (Django/Flask) RESTful APIs.
- Applied Spec-Driven Development: wrote feature specs, used AI-assisted code generation, then reviewed and validated all output before merging.
- Identified, diagnosed, and resolved software defects across frontend and backend layers.
- Collaborated via Git with pull request reviews and sprint planning ceremonies.

Full-Stack Developer (Freelance) · Upwork

Mar 2022 – Jan 2025 | Remote

- Delivered 10+ client projects: React SPAs, Django REST backends, third-party API integrations, and automation pipelines.
- Built a custom Jira dashboard system that **reduced project tracking inefficiencies by 40%**.
- Migrated legacy jQuery codebase to React, **cutting technical debt by 25%**.
- Developed WebSocket real-time audio analysis tool, **improving processing speed by 50%**.
- Adopted AI-assisted development workflow across all projects: AI generates boilerplate and logic → developer reviews, tests, and validates every line.

Full-Stack Developer · JazzTeam

Mar 2020 – Mar 2022 | Remote

- Developed and maintained enterprise web applications using JavaScript, React, and Java backend services.
- Participated in code reviews, sprint planning, and CI/CD pipeline maintenance.
- Collaborated with international distributed teams following Agile/Scrum methodology.

Front-End Developer · Likeit

Aug 2018 – Jan 2020 | Baranovich, Belarus

- Built responsive web interfaces with HTML/CSS, JavaScript, and jQuery for e-commerce clients.
- Integrated REST APIs, optimised page load performance, and resolved cross-browser compatibility issues.

TECHNICAL SKILLS

Languages: Python · JavaScript · TypeScript · C# · HTML5/CSS3 · SQL

React Ecosystem: React Query (TanStack) · React Router DOM · Zustand · React Hook Form · Zod · Vite · TanStack Table · Custom Hooks

AI-Assisted Dev: AI-Assisted Development · Prompt Engineering · Rapid Prototyping · Code Review & Debugging · Spec-Driven Development · Multi-Agent Orchestration · n8n Automation

Databases: PostgreSQL · SQLite · Django ORM · SQL Aggregation & Reporting

Frameworks & Libraries: Django · React 19 · Django REST Framework · Bootstrap · Chart.js · jQuery

AI & Integration: Google Gemini AI · OpenAI API · REST API Design · WebSocket

DevOps & Tools: Git/GitHub · Docker · Linux/Bash · Jira · Agile/Scrum · CI/CD · Gunicorn · Sentry

Cybersecurity: Network Security · Cryptography · Threat Modeling · Penetration Testing Fundamentals · Secure Code Review

SELECTED PROJECTS

Teaching Evaluation System — TE Frontend (React) [React · TypeScript · Refactoring · Production]

Production-ready frontend for a university teaching evaluation platform (Baylor University). Inherited an unstructured codebase and performed a full architectural refactor: extracted all business logic into custom hooks (useEditableSections, useEvalPageState, useSaveIndicator), introduced a modular API layer with centralised auth/error handling, replaced ad-hoc state with Zustand stores and TanStack React Query for server state caching. Role-based access control (Admin / Observer / Instructor), multi-step evaluation workflow, PDF & DOCX report export, drag-and-drop reordering, Tiptap rich-text editor, and Sentry error tracking.

Stack: React 19 · Vite · React Query · Zustand · React Hook Form · Zod · React Router · TypeScript · Tiptap · @react-pdf/renderer

Smart Expense Tracker [Finance · AI · Django]

AI-driven personal finance management app with automatic expense categorisation, budget tracking, and personalised spending insights powered by Google Gemini AI. Features interactive Finius AI character, Chart.js analytics dashboard, and sentiment analyser. Built following Spec-Driven Development: defined data models and API contracts first, used AI to scaffold views and serialisers, validated all outputs manually.

Stack: Django · Python · Gemini AI · Chart.js · SQLite · REST API

TeamHub — Group Collaboration Tool [Education · Collaboration · AI]

Student collaboration platform: create study groups, elect a leader via anonymous voting, assign roles, and auto-generate AI-split presentation scripts from a topic description or uploaded PDF. Supports real-time AJAX interactions.

Stack: Django · Gemini AI · pypdf · AJAX · Bootstrap · PostgreSQL

Handyman AI Agents (n8n Multi-Agent Automation) [Automation · AI Agents · n8n]

Production-grade multi-agent pipeline for a handyman service company. Google Sheets trigger → Orchestrator Agent → Intake Agent (extracts services, address, urgency) → Pricing Agent (base + travel + rush surcharge) → Scheduling Agent (3 time slot proposals) → Smart router: high urgency or >\$300 flagged to ops team; others auto-confirmed to client via Gmail. Designed using Spec-Driven Development — full agent spec sheet written before a single node was built.

Stack: n8n · Gemini AI · Google Sheets API · Gmail API · JavaScript · Webhooks

Portfolio AI Assistant [Cybersecurity · NLP · Bot]

Context-aware AI chatbot embedded in portfolio site, trained on professional profile, tech stack, and cybersecurity domain knowledge to answer recruiter questions in real time.

Stack: Django · Gemini AI · NLP · REST API · JavaScript

EDUCATION

Master of Science in Information Systems (MSIS)
Cybersecurity Concentration — Baylor University, Waco TX

Jan 2025 – Summer 2026 (expected)
Teaching Assistant · Aug 2025 – May 2026

Bachelor of Engineering — Software Engineering
Baranovich State University, Belarus

2016 – 2020

CERTIFICATIONS & LANGUAGES

Certifications: Duolingo English Test 120/160 (C1 — Professional Working) · AWS Cloud Practitioner — In Progress

Languages: English (C1 — Professional Working) · Russian (Native) · Ukrainian (Native)

KEY ACHIEVEMENTS

- Built Jira dashboard system — reduced project tracking inefficiencies by **40%**.
- Led React migration from legacy jQuery codebase — cut technical debt by **25%**.
- Developed WebSocket real-time audio analysis tool — improved processing speed by **50%**.
- Introduced Spec-Driven Development + AI-assisted workflow across all freelance projects, consistently delivering faster without sacrificing code quality.
- Volunteered at refugee assistance centre in Germany — provided tech support and digital literacy training to Ukrainian refugees.

Available immediately (graduating Summer 2026) · Open to Cybersecurity, AI Engineering, and Full-Stack roles · US: F-1 OPT eligible · vtkm96@gmail.com
